Attn: David Minor

Gentlemen:

RECEIVED

JAN 07 1986

DIVISION OF OIL
GAS & MINING

Below you will find a mining plan for our Green River Travertine quarry. This is also a notice for exemption of under two acres of disturbance per year.

The 20' bench is drilled and blasted down onto the level waste pile. (See Map) There it is hand sorted and then the remainder pushed over the waste pile. The quarry is worked for about ten days each year, producing 1,000 ton. The bench or quarry face advances approximately 20' per year.

We have operated this quarry for the past five years and have significantly cleaned up the area from the previous operator (who is the owner of the claim). However, there is still a lot of trash in the area, which the owner has agreed to have removed at his expense.

Sincerely,

Lon A. Thomas
President
